Global Product Safety

Most electronic and electrical products are required to comply with product safety standards under national laws and directives.

Hermon Laboratories provides complete turnkey approval solutions for many countries around the world.

Hermon Laboratories works in cooperation with worldwide organizations such as: UL, TUV, Intertek, MET labs and CSA to provide worldwide certification marks for national and international approvals including CE, CB, CCC, GOST, GS mark and more.

Experienced Professional Team

Offering a highly experienced product safety team, Hermon Laboratories provides proactive support throughout the entire certification process. The process includes the definition of target market requirements, selection of the most suitable certification route, product evaluation, certified component selection, project application and management with certification bodies.

CE Mark - European Requirements

To ship, move and sell your products across Europe they have to meet the standard requirements under the relevant directive. For most product types the manufacturer may self-declare product conformity with safety standards and directives and must label the product with the CE mark.

This means that unless there is evidence to the contrary, European authorities will assume that a product bearing the CE mark conforms to the requirement of the New Approach Legislation.

Hermon Laboratories provides certification under the following European Product Safety Directives: Low Voltage, Machinery and Medical Devices.

Voluntary certification marks such as German GS mark can be also provided.

U.S and Canadian Product Safety Approvals

In order to install products at the US work place, they must meet the product-approval requirements of OSHA (Occupational Safety and Health Administration) which is governed by the US Department of Labor. OSHA has a program that allows Nationally Recognized Testing Laboratories (NRTL) to provide product safety certification under the US Federal Law. Due to US-Canada mutual recognition agreement, NRTL approval can also cover the Canadian product safety requirements. Hermon Laboratories cooperates with leading NRTL's bodies and is accredited to carry out Product Safety tests and evaluation for the North American market.
